Press Release

3rd TTCN-3 User Conference (T3UC) Grown Again This Year

June 2006, Berlin (Germany)

The meeting of the TTCN-3 community from May 31 to June 2 at Siemens AG Berlin has been a complete success. Not only the number of participants has increased by more than 25 percent. More than half of all participants came from industries beyond Telecommunications, which reflects the great current and future benefit of [TTCN-3](#) for various business fields.

Testing Technologies, Gold Sponsor, tutorial presenter and exhibitor in this year's event, hold productive conversations with users and TTCN-3 vendors during the conference. These discussions reveal: TTCN-3 is widely adopted as a generic test language enabling users to efficiently design and implement test systems.

Andrej Pietschker, PhD SIEMENS AG, Corporate Technology Software & Engineering, received the Best Presentation Award for his contribution "[Automating Test Automation](#)".

Theofanis Vassiliou-Gioles thanks all persons involved for the interesting and inspiring discussions. "I hope to welcome you again at the 4th TTCN-3 User Conference next year. Please be aware that the conference lives on its users. We would very much appreciate a contribution to this event by presenting your TTCN-3 project", says the Chief Executive Officer of Testing Technologies, Berlin.

About Testing Technologies

With a high degree of experience in systematic and automated testing, Testing Technologies designs and markets innovative test development tools based on TTCN-3. This powerful test language guarantees highest flexibility in designing and maintaining test software on a standards level.

Testing Technologies was founded as a spin-off of the Fraunhofer Institute FOKUS in 2000. Building on its core competences and innovation strength in testing, a team of experts is working on developing new products together with customer support and training. At the same time, with its focus on cutting-edge projects, the research division ensures that products and solutions are rapidly adapted to meet the needs of evolving markets.
